## **EDUCATION**

#### 2019 - current University of Washington, Seattle, WA

Ph.D. Student in Computer Science and Engineering (GPA: 3.97/4)

- > Advisors: Ira Kemelmacher-Shlizerman, Steve Seitz
- > Affiliations: UW Reality Lab, UW Graphics and Imaging Lab (GRAIL)
- > Research Interest: Audio-visual, Deep Learning, Music Information Retrieval

#### 2015 - 2019 Harvey Mudd College, Claremont, CA

Bachelor of Science in Computer Science (GPA: 3.8/4, CS GPA: 3.87/4)

> Graduated with High Distinction and Departmental Honors in Computer Science.

### University of Washington

Research Assistant

> Audio Source Separation: Developed a novel method for speech separation using deep learning. Our method illustrates state-of-the-art separation performance, works with real-world voices, and handles arbitrary, unknown number of potentially moving speakers. We published our work as an oral paper in NeurIPS 2020.

Amazon.com, Inc.

Applied Scientist Intern, Customer Behavior Analytics Team

- > Customer Segmentation: Developed a semi-supervised deep learning algorithm for clustering highdimensional customer data using Python and MXNet Gluon. The proposed method improved clustering performance by 26% and is deployed to production for improving customer's downstream impact estimation.
- > Distributed Deep Learning: Developed a pipeline for neural network distributed training and inference using Spark and Amazon EMR cluster.

### **Microsoft Corporation**

Remote Co-op Technical Consultant, Advanced Reading Technologies Team

- > Reading Tool: Collaborated with a research team from Microsoft Research on a project of developing a reading tool for improving users' reading experience based on an eye-tracking device.
- > Eye-tracking Data Analysis: Developed an automated system to detect and classify points of interest based on user reading behavior into interested, confused, and skimming categories using Python.

Research and Teaching Assistant

- > Research Assistant Music Information Retrieval: Developed a dynamic programming algorithm for multi-modal alignment between sheet music and corresponding computer-synthesized MIDI. Designed a deep fully convolutional network for detecting musical notes on sheet music and generating compact representations for the alignment using Python, Keras, and Tensorflow. Our method is published in ISMIR 2019.
- > Research Assistant PCB Developer: Designed and developed a PCB consisting of a microcontroller SAM4S and a Cyclone IV FPGA to be used in a microprocessor-based systems class and created lab instructions based on the developed PCB. Our work is published in GLSVLSI 2020.
- > Research Assistant Stock Market Analysis: Applied machine learning techniques to detect anomalies in stock market data. Developed a backtesting system and an actual automated trading system that connects to InteractiveBrokers for real-time trading. Developed the distributed system and frontend using Python, Django, and Celery for parallelization.
- > Teaching Assistant: Tutored students, held office hours, graded students' homework for Machine Learning, Big Data, and Microprocessor-based Digital System.

May 2017

Remote Summer Research Assistant

- > Proposed a computational model for sound field separation and reconstruction of a 3-dimensional acoustic environment.
- > Designed a headphone-based system to simulate 3-dimensional sound localization effects using Head-Related Transfer Functions using Python.
